AMOS – Swiss quality at its best

Swiss AviationSoftware (Swiss-AS) develops, markets and sells the MRO software solution AMOS and has been doing so for three decades. Our long experience, combined with an uncompromising pursuit for quality and safety, and our commitment to equip the Swiss-AS customer community with a state-of-the art solution are not just empty words.

By following Swiss-AS policy to focus on strategic, long-term developments, as opposed to “quick wins”, we strengthen our customers competitive edge and assure the longevity of the product.

The pace of change in the aviation industry has accelerated in recent years. New-Generation aircraft came along with sophisticated software systems. Aviation maintenance organizations became paperless (or are on their way there) and requested mobile solutions to increase the efficiency of their workforce. In addition, companies asked their MRO software providers to operate the MRO system in secure cloud environments.

These circumstances have all been challenges Swiss-AS/AMOS has successfully tackled. However, the process of change and the required adaptation does not halt here. AI, ML, blockchain, connectivity, data analytics, etc. are no longer just buzzwords, but are innovation trends that sooner or later find their way into the customers maintenance eco-systems. In this process of continuous change, Swiss-AS – while relying on its own and customer expertise – will help the large circle of customers to shape and accelerate their digital transformation process while pushing many initiatives to bridge the digital gaps in MRO processes. AMOScentral is just one example in this respect. It allows each AMOS customer to open its platform to collaborate to the desired extent with other AMOS customers and far beyond (see for more info page 8).

All this has only been possible due to our loyal customers and a large community of expert users who have fundamentally contributed in making AMOS a mature, proven and internationally renowned system.

The confidence placed in us by our customers is paramount and we will continue to invest in a future-proof system that meets the needs of the fast-growing AMOS community.

AMOS - a people business

From airliners for airliners

3

Swiss-AS – a subsidiary of SWISS

Swiss-AS is a 100% subsidiary of Swiss International Air Lines and is as such embedded in the Lufthansa Group. Swiss-AS can refer to the Group at any time to learn well in advance about fast-changing requirements and trends of the MRO industry.

It goes without saying that the know-how collected from the SWISS / Lufthansa Group has made AMOS a truly targeted product that succeeds in managing the complex requirements of aviation maintenance.

During the many years in business, Swiss-AS has always relied on the input of the large customer community and has invited its customer experts to numerous workshops – each workshop dedicated to a specific topic – in order to gain insight into the operations and business processes of these customers and to feed their valuable input into the AMOS development process.

Only with this knowledge acquired over decades has it become possible to develop a product that helps customers to streamline their maintenance processes and achieve a real return on investment, while complying with a complex system of airworthiness regulations.

Facts about Swiss-AS

Headquarters:	Allschwil, Switzerland
Representations:	Miami, Singapore, Tokyo
Company founded in:	2004
Development of AMOS started in:	1989
No. of employees (as of September 2022):	260+
No. of customers (as of September 2022):	200+
Profitable since its first day.	

Fluently speaking the language of MRO

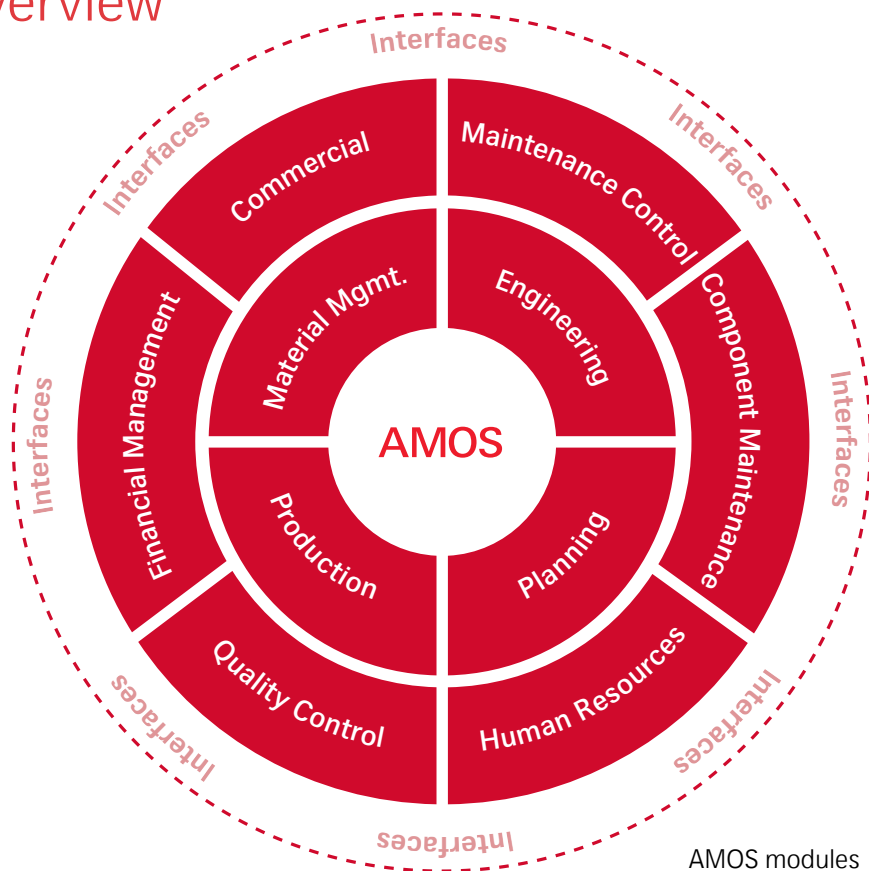

One of the biggest assets of the company is the stability of the AMOS team. The extremely low employee turnover has allowed us to continuously increase the Swiss-AS know-how pool regarding MRO business processes and system technology which is reflected in the product.

We can proudly state that due to our experience and expertise we speak the language of the business.

“With AMOS, Malaysia Airlines is looking ahead to bring airworthiness, operational and financial control to an enhanced level,” says Malaysia Airlines.

Technicians' first choice

Product overview

AMOS modules

The available scope of AMOS today covers the business requirements of modern airlines and MRO providers of all sizes. With AMOS, our customers are able to successfully manage their maintenance, engineering and logistics needs and to see to their compliance with a complex system of aviation regulations. The key differentiators that make AMOS stand out in the M&E software market are the system's high degree of integration and functional depth coupled with ease of use.

AMOS consists of eight modules which build the heart of the system while two additional functional sets (Human Resources and Financial Management) complete the system.

Also worth mentioning are the many functions that go beyond the limits of module boundaries like workflow management, rule engine, reporting and interfaces.

User-friendliness

The functional depth and width of AMOS is of no value to the end-users if ease of use is not linked with it. The user-friendly graphical user interface of AMOS, in which all programs have the same look & feel, is a guarantee for user efficiency and productivity. The users' access to related programs

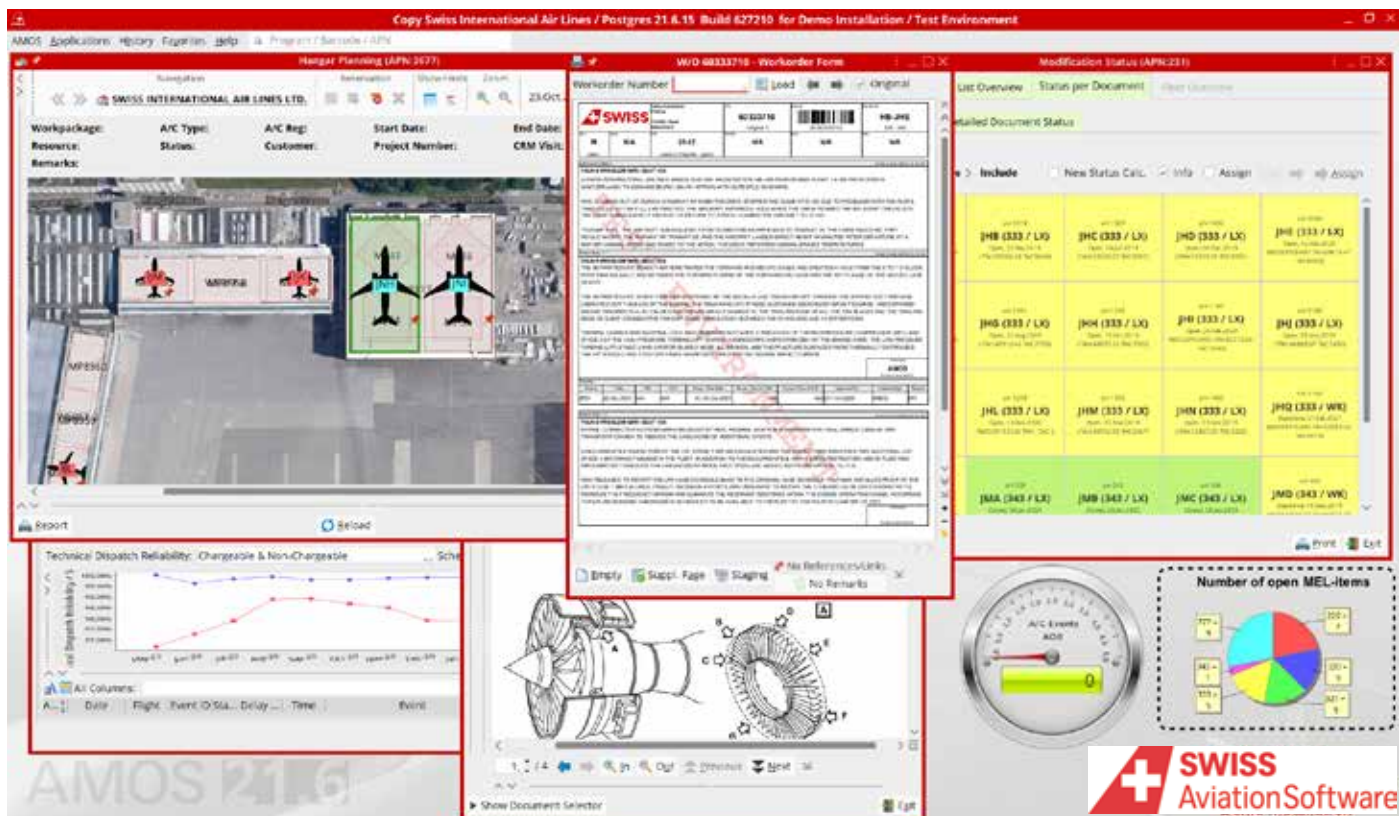

and data by right-mouse clicking or the personalisation of the desktop are only some highlights that enable easy navigation for users in AMOS.

The ultimate goal is to make relevant information visible and easily accessible wherever needed, to allow users to make well-informed business decisions.

AMOS – a community product

AMOS is a community product with all the advantages this entails for our customers. The system is used by a large customer base who actively support AMOS by their daily input. Swiss-AS is obliged to react to this input and also to the changing maintenance requirements and industry innovations at an early stage in order to satisfy the needs and expectations of the large clientele. The developments and enhancements made by Swiss-AS include the know-how and expertise of the members of the AMOS community who are asked to contribute to the selection, analysis and specification of new developments.

Although AMOS is a community product, the setting of hundreds of parameters which steer functions and processes in AMOS and different workflow settings give the individual customers the flexibility they need for their specific maintenance context.

AMOS for whom?

AMOS meets the demands of

- airlines of all size and type from start-ups to tier-one organisations
- maintenance organisations working for specific airlines
- independent MRO providers, CAMO organizations and
- operators of all aircraft types (including New-Generation aircraft, rotary-wing aircraft, etc.)

While having attracted more than 200 customers worldwide, AMOS is successfully handling the balancing act of selling a product that is suitable for all companies regardless of size in whichever context. AMOS meets the requirements of complex corporate organisations with many capabilities (such as **"Multi-Entity"** functions).

AMOS Editions

AMOS is available in four different editions that cater for airlines and MRO organisations of all sizes.

The different editions are targeted to meet the requirements of each customer in an optimised manner: From the lean and flexible CAMO Edition up to the MRO Edition that allows – with its dedicated additional functional scope – even pure MRO organisations to manage their maintenance tasks as efficiently as possible.

Existing APIs and Integrations

Following the demands of the industry AMOS is not sold as a stand-alone product, but can be fully embedded in the customers' digital eco-system. Many APIs are part of AMOS and allow customers an easy integration with Finance, HR, Operations, ETL and many other systems.

AMOS currently offers more than 300 managed APIs to be used out-of-the-box to integrate third-party systems or for generic purposes to transfer WOs, WPs, etc. Another option for the customer is to use internal APIs, much more granular than managed APIs, being a good workaround in use cases where a managed API doesn't exist yet or where just-in-time focused information is needed. As a third option, direct database access APIs are also supported for read only purpose, typically used for BI, data analytics, reporting purposes.

Creating APIs has become part of our daily business, and while being an official ATA e-business program member, we provide them in accordance with ATA SPEC2000 and SPEC2500 in all contexts where such standards exist.

"AMOS is the best IT solution for an airline having its own MRO and we are sure that with its help we will become more efficient," states Ural Airlines.

AMOSmobile/EXEC Dashboard

Line Maintenance Manager

AMOS highlights

Introduction

6

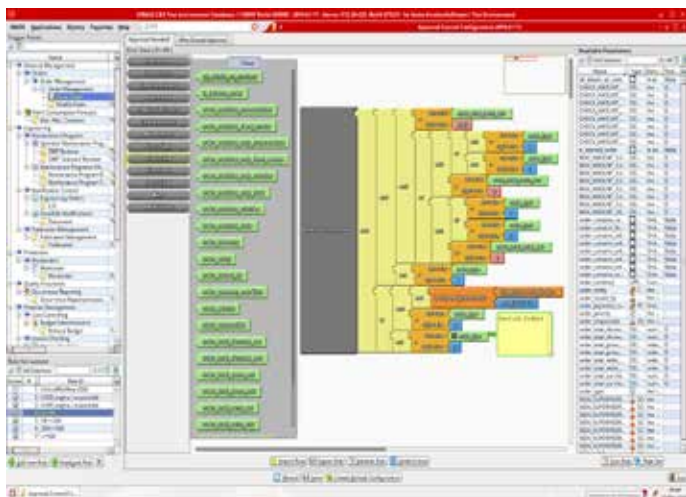

Many innovations and enhancements have paved the way for the success of AMOS. Everyone within Swiss-AS and the customer community is encouraged to look at how to make improvements and contribute to sustainable new developments, concepts and ultimately add to the longevity and competitiveness of the system. Only developments that are receptive with customers are of true value for the end-users. The size and flexibility of Swiss-AS has allowed us to promptly react to new or changing needs and requirements of the market.

Highlights of AMOS

- The **AMOS MRO Edition** supports large pure-play MRO organisations with a set of specialised modules such as Customer Relationship Management and Quotation & Billing Manager. This edition also delivers a graphical hangar slot reservation tool and an built-in work package graphical Gantt-view to ensure base maintenance scheduling accuracy for Part 145 provider and airlines performing base maintenance. The initial scope of functions offered in this edition was developed in close cooperation with selected MRO organisations from within the AMOS community. This allowed Swiss-AS to bring in the valuable know-how and experience of market leading MRO organisations to ensure that the new features fully meet the requirements of the target group.
- Recently, the new **"Line Maintenance Manager"** module has enriched the production application. This module gives a full overview of

all aircraft turnarounds. By implementing rules, users have the possibility to create work packages for the ground time between the flights taking in consideration the flight schedule and to automatically create and assign maintenance events to workpackages. Additionally, maintenance staff can be assigned efficiently to an aircraft that needs maintenance located on the ramp and report back once the work is performed.

- To meet the needs of the industry and increase workforce effectivity, Swiss-AS offers **"AMOSmobile/EXEC"**, a touch-optimised mobile package that compiles a suite of modules for usage on mobile devices. AMOSmobile/EXEC is fully integrated into AMOS and the first module offered to the AMOS community is "Maintenance Execution", covering functions such as dispatch, handling and e-signature of workorders, stock information and parts requests, fleet status, approval control, etc.
- The **"Multi-Entity"** functions in AMOS allow multiple financially independent entities to work in one AMOS environment. Consequently, airline groups or aviation companies with subsidiaries in different countries are able to consolidate all activities in one system while still complying with local regulations.
- **"Advanced Reorder Proposal"**: The latest development of advanced inventory management concepts and data visualisation helps our customers to improve the performance of their supply chain and to further save costs.

Aircraft Configuration Management / Rule Engine

Hangar Planning

Customers' high flexibility

It is not our intention to create revenue with routine tasks that the customers can fulfil by themselves (e.g. writing reports), but instead give our customers maximum flexibility and dedicate our resources to more complex tasks while keeping the community product AMOS, as configurable as possible. This allows the AMOS administrators to shape and model AMOS according to the requirements of their business without any involvement from Swiss-AS. With this goal in mind, Swiss-AS extended the **"Report Designer"** framework which allows customers to adjust existing reports and working forms to their specific needs.

Also a complex **"Workflow Management"** system adds to the customers' high flexibility and independence. Another highlight is the integration of a **"Rule Engine"** (see screenshot) which allows user definable workflows for complex business rules, e.g. for contract management, financial approval processes and aircraft configuration management.

With the entry into service of New-Generation aircraft new programs were added to the functional scope of AMOS, such as **"Software Administration"**, while existing programs like **"Configuration Management"** had to be substantially enhanced in order to meet the requirements of New-Generation aircraft operators.

High degree of security

AMOS provides a high degree of security for parallel sessions and various security features have been added. Features allow a fine grained control of the usage of AMOS and to limit a login to a given list of IP addresses or to prevent that the users share a login. We also introduced a content filter for the AMOS built-in web-drive to prevent the uploading of malicious files. We work continuously on many security improvements to support all type, size and complexity of organisations.

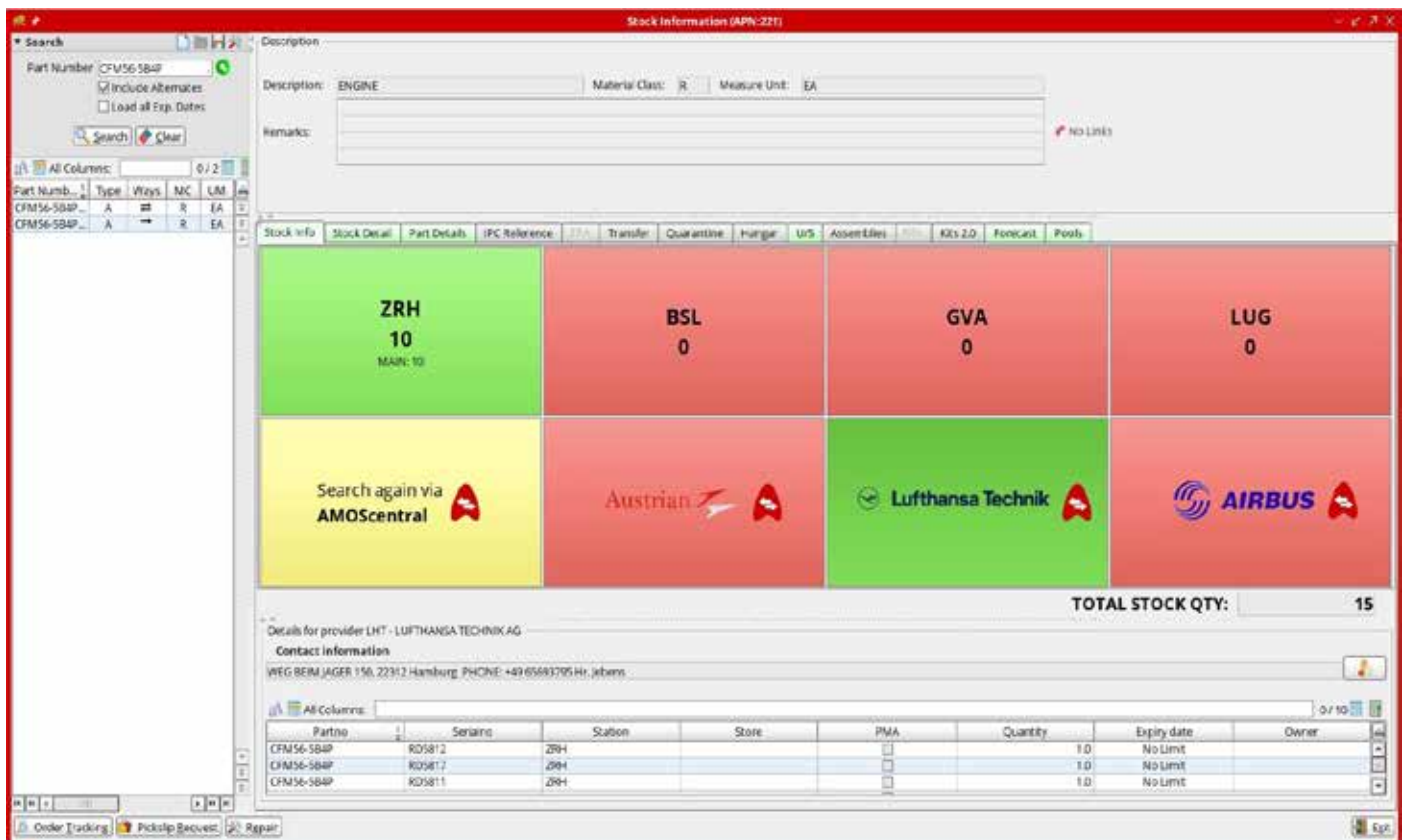

Relying on a new, highly efficient tech stack: Flutter / Dart from Google

Currently AMOS follows a hybrid approach: There is the (i) AMOS native client/app for "heavy" desktop-office usage (running on Windows/Linux/ChromeOS, etc.) with zero deployment effort for the customer and (ii) the AMOS web client/app for "light" / hands-on users in hangars, shops etc. with freedom to choose the operating system and HW (Android / iOS). Upon selecting Flutter/Dart from Google as our future tech stack, the development of the new AMOSmobile/STORES suite was launched. With the successful completion of this pilot project including the provisioning of off-line capabilities, it has been determined that the new front-end technology will be rolled out to AMOSmobile/EXEC (the AMOS line/base maintenance mobile suite) – with the ultimate goal in mind to offer one day a holistic AMOS front-end out of a single code base.

Thanks to this cross-platform development approach, developers write code once and re-use it for different platforms with secure, stable, and easy to maintain features. Thus, AMOS users will enjoy a completely new user experience due to material design language.

Additionally, the AMOS Research Lab constantly evaluates new trends and technologies such as wearable devices, virtual reality, predictive maintenance, geolocation tracking, AC health monitoring, etc.

"We are constantly looking for ways to improve value-added fleet management services, to integrate MRO business activities and expand overall customer service capabilities. We believe that AMOS' MRO edition is the primary enabler to help us achieve our business integration objective," states EGAT.

8

AMOScentral

Empowering collaboration by shifting boundaries

AMOS has one of the largest global reaches within the M&E software world. Following the need of members of the AMOS community to collaborate one way or another, the concept of AMOScentral has evolved over the last years.

AMOScentral is a collaboration platform and represents an addition to the currently available AMOS suite. AMOScentral will allow members of the AMOS community to collaborate in an unmatched way by either providing or receiving data sets or raising data requests over multiple environments according to each member's needs and requirements.

Both parties, subscriber and provider, need to agree to the exchange of info via AMOScentral where privacy is guaranteed due to the end-to-end encryption of data. Strong encryption for the communication channels and the data exchanged is an important cornerstone of this architecture. Only the parties involved may read the data objects being exchanged, which ensures that AMOS customers never lose control of their data.

Even if already today the existing AMOS Multi-Entity/ Multi-Operator functions offer customers a medium for close cooperation which has been well received in airline group contexts, the spectrum of collaboration via AMOScentral has many facets and will be an enrichment for all members of the AMOS community.

AMOScentral at a glance

- message broker (no data is stored)
- cloud-based and therefore scalable
- enables the routing of AMOS data between instances
- organises the "handshake" between members while determining the best-fit communication
- will create gateways to connect external platforms

By spanning a virtual cloud over all AMOS instances, AMOScentral allows each AMOS customer to individually open its platform to collaborate to the desired extent with other members of the AMOS community and beyond.

AMOS Customers

Benefits

Why Swiss-AS?

- + Swiss-AS with its long history in the MRO software market stands for experience and expertise.
- + Swiss-AS develops and sells only AMOS. Our business is exclusively dedicated to the MRO business.
- + Swiss-AS continuously invests in manpower increase to meet the requirements of a fast growing community.
- + Swiss-AS stays true to the principles of its country of origin: quality, reliability and safety.
- + Swiss-AS is embedded in one of the biggest airline groups of the world.
- + Swiss-AS is financially sound and therefore able to invest in the future.
- + Swiss-AS relies on a big customer community that is a valuable source of input and expertise.
- + Swiss-AS has vast experience in implementing AMOS and has a proven implementation process.
- + Swiss-AS offers a full package of support services after cutover from online support to e-learning, "What's New" videos, etc.

Why AMOS?

- + AMOS is a product whose functionality has grown over decades and is today a proven and mature product.
- + AMOS is renowned for functional width / depth and integration.
- + AMOS is a quality product thanks to well established quality assurance procedures being in place.
- + AMOS incorporates industry trends at the earliest while always keeping an eye on the system's usability and longevity.
- + AMOS focuses on well researched innovations instead of quick wins to ensure the longevity of the product.
- + AMOS is the product of a community whose business know-how and input flows into the product.
- + The AMOS implementation allows customers to introduce best practice maintenance processes.
- + AMOS is not standing still. Customers receive with each release (2 per year) new functions and system enhancements.

Swiss-AS Team

Sample benefits of AMOS

+ Optimisation of maintenance processes

- Possibility to exhaust maintenance limits to its full due to accurate calculations.
- Careful planning of all maintenance events in AMOS including manpower and material.
- Scheduling of maintenance activities against the flight schedule.
- Analysis of trends of components / airframe = pro-active maintenance rather than reactive.
- Additional functions for Multi-Operator contexts.
- Workflow settings allow the automatisisation of maintenance processes.

+ Cost reduction

- Avoidance of AOG due to careful planning of required material availability.
- Reduced inventory due to optimisation of consumables' and rotatables' stock levels.
- Identification of surplus material.
- Comprehensive warranty tool to optimise cost recovery.
- Customers benefit from enhanced cost control functions (new "Quotation Manager", "Budget Management", etc.)

+ Motivated users

- User-friendliness of the system.
- Possibility to customise AMOS set-up according to the user's profile.
- Visibility of all information necessary to take informed decisions including manuals, workstep descriptions, etc.
- "Technical Assistance" program which triggers a support process when a user or technician needs help.
- Availability of "Experience Sheets" within system to reduce time spent on research.

+ Long-term return on investment

- With AMOS being a community product the system is continuously challenged by the requirements of a large customer base.
- AMOS as a best-of-breed solution is able to react to fast-moving changes and innovations of the industry.

With AMOS customers benefit from a proven, comprehensive and future-proof system which has been true to its principles for more than three decades.

Swiss-AS as a service partner

Customer tailored support

Swiss-AS' customer oriented service strategy aims to maximize customer benefits by targeting the following areas:

- Maximizing AMOS adoption scope.
- Accelerating AMOS implementations.
- Reducing customer's IT costs.
- Facilitating AMOS upgrades.

Swiss-AS looks back upon more than three decades of experience regarding every single implementation step as well as post go-live support.

Ranging from initial requirement studies to system installation, from user training to consulting and 24/7 support – we have the bespoke solution for any specific customer environment.

Due to a proven implementation methodology we make sure that projects are structured in a way that complex requirements are met while both time and budget constraints are respected. Our project methodology is a collaborative approach that ensures a client's involvement throughout all phases of the project.

During the implementation, Swiss-AS follows a standardised approach, which was successfully proven in the past 190+ projects – so far all AMOS implementations have been successful!

Although the project methodology is standardised, it is nonetheless in many ways personal and at any stage creative and customer oriented so that there is enough room to adapt the implementation services to the customer's needs.

Swiss-AS offers the following services to ensure that AMOS customers – not only during implementation but also in the long-run – fully profit from the potential of AMOS:

- Project management – to accelerate implementation project duration.
- Business consulting – to design the new

processes under AMOS and provide guidance towards a digital TechOps.

- Organisational Change Management – to help customers properly navigate the transformation from their current state to their future state.
- Training – to effectively transfer AMOS knowledge to the customer's organization and enable staff in this transformation initiative.
- Customer support – to expedite issue resolution by providing targeted advice.
- System customisation – to address general and particular business requirements.
- Interfacing – to ensure end-to-end digital processes between AMOS and other systems.
- Data integration consulting – to support customers in all aspects of transferring data from the legacy system to AMOS and supporting customer to maintain high data quality and correctness.
- AMOS Operation Services (AOS) – to ensure optimal management and control of the application.
- Full hosting of the AMOS environments in the cloud – to let customer focus on doing maintenance and improving processes, not doing IT.
- Release upgrade support – to fast track release upgrades.

"The professionalism of the AMOS team has allowed us a high performance and stability in the use of the tool in our maintenance bases, also helping to minimize the costs of hardware," says Viva Aerobus.

Sample pre-go-live services

Data Integration Support

Data transfer is always an important and critical project activity within the implementation phase and a key element to consider when adopting a new system. Ensuring high data quality and correctness is critical for project success and continued airworthiness.

Swiss-AS equips its customers with a highly sophisticated migration tool – fully documented – that facilitates the data transfer process.

In addition, Swiss-AS has gained substantial knowledge over the years perfecting the best possible data migration procedure and will assist customers in making the right decisions when it comes to planning the data transfer project.

Training

The options range from classroom training to personalised “on-the-job” training, e-learning and virtual classroom sessions. The training offered spans over all AMOS user groups to provide the most suitable and cost effective training concept for each customer.

Business Consulting

To lay the foundation for a successful AMOS implementation and on-going smooth system operation, Swiss-AS provides consulting services to assist the customer in the process of developing or modifying its internal processes, based on best-industry maintenance practices, to boost the users’ productivity and exploit the maximum benefit of AMOS.

Sample post-go-live services

Customer Support

As customer satisfaction is valued highly by Swiss-AS, our support infrastructure is constantly under review to ensure optimum usage of AMOS by our customers.

AMOS users are provided with a comprehensive support package through the AMOS Online Support tool and AMOS Online Documentation. Of course there is also a 24/7 hotline for emergency cases.

Customer seeking an even more personalized guidance, in order to assess and implement business initiatives, can choose between several advisory packages. Dedicated account consultants will work closely with the customer to guarantee a high benefits realization of such initiatives.

AMOS Hosting, Application Operation and Monitoring

Customers have the possibility to outsource the partial or full operation of AMOS to Swiss-AS.

Swiss-AS offers a wide and flexible AMOS cloud hosting service portfolio to meet various customer’s requirements. Our reliable cloud infrastructure ensures maximum availability in agreement with the latest IT and security standards. Indeed, Swiss-AS achieved the ISO/IEC 27001:2013 certification in 2020 and provides security by design while its cloud solution is based on a hosting layered defence approach. Additionally, the AMOS Operation Services (AOS), being part of the hosting package, cover all duties arising from the AMOS application server and database administration. The service package also includes AMOSmonitoring, an intelligent, proactive monitoring and alerting tool aimed to modernize the AMOS operation.

These options relieve customers from the requirement to operate a technical infrastructure on premises and provides an attractive and cost effective alternative.

Release Upgrade Support

Customers can opt between different release upgrade packages that help them to introduce new release in a short time frame. The scope of activities within the packages cover technical, release management and business process aspects.

AMOS worldwide

Swiss-AS makes headway in the Americas and Asia-Pacific region

Spreading its wings...

While being the market-leader in Europe and having a substantial market share in other parts of the world, Swiss-AS embarked on the strategy to continue to intensify its presence in non-European markets by setting up local representations outside of Europe.

...to the Americas

The first step towards this goal was the establishment of an AMOS business unit in Miami, FL, USA, in 2010. Back then, Swiss-AS was looking for a partner and found in its sister company Lufthansa Systems the ideal ally for its strategic growth plans.

"AMOS has streamlined our processes at AirAsia. To cite an example: Stock level alerts at each station have improved our operative business in such a way that AOG could be avoided several times," says AirAsia.

...and to the Asia-Pacific region

Only two years after this collaboration, Swiss-AS continued its strategic expansion plans – this time towards the East – while relying again on Lufthansa Systems as a business partner. The AMOS Asia-Pacific office is located in Singapore and – just like the Miami representation – is fully dedicated to AMOS-related activities, which imply pre- as well as post-go-live services. The Asia-Pacific region is known in the aviation business as one of the most important growth markets worldwide. Although AMOS is already used in South-East Asia, the fact that a remarkable percentage of the local airlines and MRO providers do not have a professional M&E system in place encouraged Swiss-AS to further intensify its presence there.

Both, Singapore and Miami are the perfect hubs from where we can conveniently reach our customers in remote parts of the globe and connect them with our homebase in Switzerland. The expansion strategy has proven its worth already and significantly accelerated the growth of the AMOS community outside Europe.

What's coming next?

AMOSmobile/STORES

- Picking List
- Inventory Control
- Location Management
- Return and Tools
- on/offline
- Transits

Swiss-AS eTLB

- AC turn around times reduction
- Increased data consistency, accuracy and real-time availability
- Techlog process cost reductions

Reaching new technological heights

- Rising to the next level of innovation by introducing a new technology stack Flutter / Dart
- Cross-platform mobile development with Flutter / Dart revolutionising app development
- Beautiful native apps in record time
- Merge AMOSdesktop and AMOSmobile to a holistic frontend based on Flutter / Dart
